

Using The Terminal - Navigation

Pressing CTRL+ALT+T (OR CTRL+OPTION+T for MAC) opens the *TERMINAL*

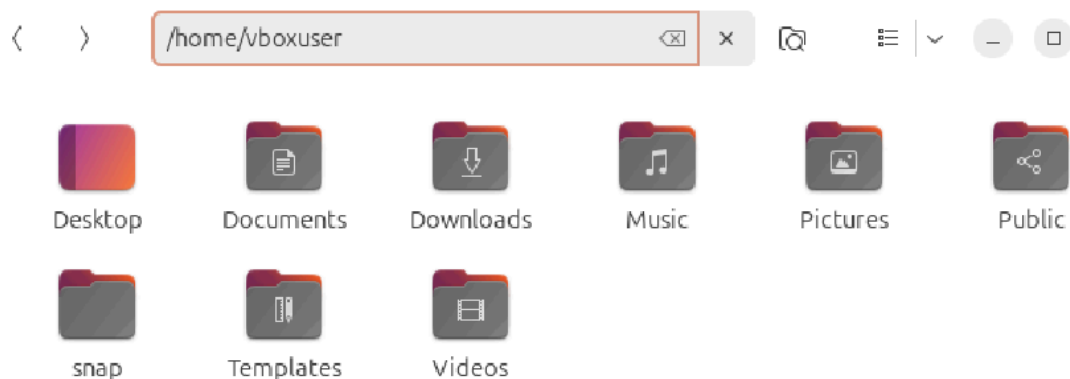

- Also open the *File Explorer*, (2nd One on the left)

Ok, what is this "Terminal?" Essentially, in it's most basic form; a **text based file explorer**. AND in it's full form a way to do anything you usually do on your computer, *but with your keyboard*.

Since the Terminal "is" a File Explorer, if we look at our File Explorer there's a path at the top.

- The Terminal, also exists in paths.

Our first command is

> **pwd**

- This shows *WHERE in the file explorer* your **TERMINAL** is in.
 - Currently, we're in the same place as the *File Explorer*

```
vboxuser@ExampleName:~$ pwd
/home/vboxuser
```

Our Second command is

> **ls FolderYouWishToLookAt** Leaving it **BLANK** *lists whats in your current folder*

- This shows the **CONTENT** of the folder you are in (*Or Chosen one*)

```
vboxuser@ExampleName:~$ ls
Desktop  Documents  Downloads  Music  Pictures  Public  snap  Templates  Videos
```

Our Third command is

> **cd Folder Name We Want To Go To**

- This **MOVES** our location in the **TERMINAL**, "cd" means change directory.
 - **Directory** is the **LINUX** name for Folders.

```
vboxuser@ExampleName:~$ cd Downloads/
vboxuser@ExampleName:~/Downloads$
```

> **cd ..** *".." is to go back, effectively the back button.* ←

These 3 *commands* are *roughly 50%* of what You'd normally *ever be asked to do* in the **TERMINAL**. The next PDF will cover the last 5 or so important ones.
